AC Retrofit

- LXP 3600 ACS / LXP 3600 SQPOD

DC Retrofit

- LSP 100K

One Step to Retrofit Your Solar System

/ AC Retrofit

Retrofit an existing on-grid solar system to add battery storage.

It couldn't be easier than installing an LXP AC series inverter coupled on AC side with a battery pack. Installation of a Lux AC system should not affect existing solar systems or feed in tariffs.

/ DC Retrofit

To retrofit an existing PV system by incorporating DC side coupling to create an energy storage system. With this enhanced storage system:

It becomes compatible with batteries, enabling the addition of more PV panels, while also allowing the PV system to operate on a predefined schedule:
-By setting the charging/discharging timeline of the battery, it achieves an equivalent/similar effect as the Peak Shaving operating mode.

AC RETROFIT

LXP 3600 ACS

- Retrofit any on-grid/micro-grid system to energy storage system
- Battery charging/discharging current: 70A
- Octopus smart time of use and weather optimize
- On/off grid seamless switching
- Support up to 8pcs in parallel
- Separate EPS port for flexible load management

Lux Power Battery Storage Agile Auto Charge

Luxpower and Infinity Innovations Ltd. have developed an Agile Auto Charge (AAC) to allow automatic off-peak charging using the cheapest rates available. This is a Beta system and therefore reacts to data provided by Octopus. Lux Power has no involvement or responsibility for the content or timing of the information provided. It is recommended that you read the Octopus Blog regarding all systems approved as compatible with Octopus.

<https://octopus.energy/blog/works-with-octopus/>

The AAC analyses the time and prices of the electricity information published by Octopus Energy and ranks the information by the price. You can therefore just input the number of charge periods you want to use, and the system will automatically charge using only the cheapest periods.

Simple to Programme

Agile Auto Charge will appear on your Luxpower Portal once activated by Infinity Innovations Ltd. Simply select the quantity of 30-min charge periods you require for Night or Day charging and press save!

Night Charge - From midnight to 6am.

Select the desired number of charge periods, and your system will automatically adjust to charge during periods when prices are at their lowest.

Day Charge - From 12 noon to 4pm.

This will allow you to top-up your batteries ready to get through the more expensive On-Peak periods.

Blocking Discharge

You can also set periods where the batteries can charge but will not discharge. For example, block discharging from midnight to 6am and your batteries will charge using only the cheapest rates but will not discharge. So you can set all heavy usage items - washing machines, dishwashers, EV charging etc. to also run at night without emptying your batteries. Using this function, you can ensure your batteries are 100% charged ready cover your house load at 6 a.m.
